TOPOLOGY

An International Journal of Mathematics founded by J. H. C. Whitehead

Editors

Prof. B. J. BIRCH
Prof. S. K. DONALDSON
Professor I. M. JAMES
Dr. F. C. KIRWAN
Prof. D. QUILLEN

The Mathematical Institute, 24–29 St. Giles, Oxford OX1 3LB, England

Professor RALPH COHEN, Stanford University, Stanford, CA 94305, U.S.A.

Professor F. HIRZEBRUCH, Max-Planck-Institut für Mathematik, Gottfried-Claren-Strasse 26, D 53 Bonn 3, West Germany

Professor LARRY SIEBENMANN, Mathematique Bâtiment 425, Université Paris Sud, Centre D'Orsay, 91405 Orsay Cedex, France

Honorary Editorial Advisory Board

V. I. ARNOL'D, M. F. ATIYAH, R. BOTT, H. CARTAN, I. M. GEL'FAND
B. LAWSON, J. W. MILNOR, G. B. SEGAL, H. SEIFERT, J.-P. SERRE

Production Editor

COLIN BROWN, Pergamon Press Ltd, Headington Hill Hall, Oxford OX3 0BW, England

Topology publishes papers in all parts of mathematics, but with special emphasis on subjects which are related to topology or geometry.

Manuscripts (two copies) should be sent to one of the Editors for consideration.

Authors are asked to make clear the address to which correspondence and proofs for correction should be sent. One hundred free reprints of each paper will be provided. Additional reprints may be obtained at reasonable cost, provided that they are ordered when the proofs are returned and using the reprint order form which will accompany the proofs.

Publishing, Subscription and Advertising Offices

Pergamon Press Ltd, Headington Hill Hall, Oxford OX3 0BW, England (Phone (0865) 794141; Telex 83177)

Subscription Rates

Annual Institutional Subscription Rate (1993): £350.00 (U.S.$665.00). Sterling prices are definitive. U.S. dollar prices are quoted for convenience only, and are subject to exchange rate fluctuation. Prices include postage and insurance and are subject to change without notice. Subscription rates for Japan are available on request. Personal subscription rate for those whose library subscribes at the regular rate (1993) is available on request. Subscription enquiries from customers in North America should be sent to: Pergamon Press Inc., 660 White Plains Road, Tarrytown, NY 10591-5153, U.S.A., and for the remainder of the world to: Pergamon Press Ltd, Headington Hill Hall, Oxford OX3 0BW, England. Application to mail at second class postage rate is pending at RAHWAY NJ. Postmaster send address corrections to Topology, c/o Pergamon Press Inc., 660 White Plains Road, Tarrytown, NY 10591-5153, U.S.A.

Published Quarterly in January, April, July and October

Whilst every effort is made by the publishers and editorial board to see that no inaccurate or misleading data, opinion or statement appear in this journal, they wish to make it clear that the data and opinions appearing in the articles and advertisements herein are the sole responsibility of the contributor or advertiser concerned. Accordingly, the publishers, the editorial board and editors and their respective employees, officers and agents accept no responsibility or liability whatsoever for the consequences of any such inaccurate or misleading data, opinion or statement.

CONTENTS

NUMBER 1

GUNNAR CARLSSON: A survey of equivariant stable homotopy theory 1

W. G. DWYER, H. R. MILLER and C. W. WILKERSON: Homotopical uniqueness of classifying spaces 29

MARTIN BENDERSKY: The v_1-periodic Unstable Novikov Spectral Sequence 47

HAL SADOFSKY: The root invariant and v_1-periodic families 65

STEFAN JACKOWSKI and JAMES MCCLURE: Homotopy decomposition of classifying spaces via elementary abelian subgroups 113

MARK MAHOWALD and ROBERT D. THOMPSON: The K-theory localization of an unstable sphere 133

JOHN MARTINO and STEWART PRIDDY: The complete stable splitting for the classifying space of a finite group 143

D. J. BENSON and M. FESHBACH: Stable splittings of classifying spaces of finite groups 157

C. A. MCGIBBON and J. M. MØLLER: On spaces with the same n-type for all n 177

NUMBER 2

TOSHITAKE KOHNO: Topological invariants for 3-manifolds using representations of mapping class groups I 203

LEE RUDOLPH: A characterization of quasipositive Seifert surfaces (constructions of quasipositive knots and links, III) 231

BONAVENTURE LOO and ALBERTO VERJOVSKY: The Hopf fibration over S^8 admits no S^1-subfibration 239

MARTINE KLUGHERTZ: Existence d'une integrale premiere meromorphe pour des germes de feuilletages a feuilles fermees du plan complexe 255

YING-QING WU: Incompressibility of surfaces in surgered 3-manifolds 271

DAVID G. WRIGHT: Contractible open manifolds which are not covering spaces 281

MICHAEL HANDEL: Commuting homeomorphisms of S^2 293

WILLIAM H. MEEKS III and SHING-TUNG YAU: The topological uniqueness of complete minimal surfaces of finite topological type 305

DIETER KOTSCHICK: Remarks on geometric structures on compact complex surfaces 317

MICHEL COSTE and KRZYSZTOF KURDYKA: On the link of a stratum in a real algebraic set 323

MAREK KOSSOWSKI: Prescribing invariants of Lagrangian surfaces 337

AVNER ASH and MARK MCCONNELL: Mod p cohomology of $SL(n, \mathbb{Z})$ 349

DARRYL MCCULLOUGH and ANDY MILLER: The stable genus increment for group actions on closed 2-manifolds 367

MASAAKI WADA: Group invariants of links 399

F. E. A. JOHNSON: Extending group actions by finite groups. I 407

GAËL MEIGNIEZ: On completeness of transversely projective foliations 421

W. G. DWYER and C. W. WILKERSON: A cohomology decomposition theorem 433

BRIAN WHITE: On the topological type of minimal submanifolds 445

NUMBER 3

N. J. HITCHIN: Lie groups and Teichmüller space 449

P. GILMER and C. LIVINGSTON: The Casson–Gordon invariant and link concordance 475

JOEL HASS and PETER SCOTT: Homotopy equivalence and homeomorphism of 3-manifolds 493

AMNON NEEMAN: The chromatic tower for $D(R)$ 519

THOMAS BARTSCH: On the existence of Borsuk–Ulam theorems 533

J. L. ARRAUT and N. M. DOS SANTOS: The characteristic mapping of a foliated bundle 545

GRANT CAIRNS, MEHMET ÖZDEMIR and EKKEHARD-H. TJADEN: A counterexample to a conjecture of U. Pinkall 557

BOGUSŁAW HAJDUK and TADEUSZ JANUSZKIEWICZ: Cobordism of polarized t-structures 559

R. W. THOMASON: Le principe de scindage et l'inexistence d'une K-théorie de Milnor globale 571

RONALD FINTUSHEL and RONALD J. STERN: Integer graded instanton homology groups for homology three spheres 589

W. J. R. MITCHELL, D. REPOVŠ and E. V. ŠČEPIN: On 1-cycles and the finite dimensionality of homology 4-manifolds 605

V. POÉNARU: The collapsible pseudo-spine representation theorem 625

ABIGAIL THOMPSON: A polynomial invariant of graphs in 3-manifolds 657

SÉRGIO R. FENLEY: Quasi-isometric foliations 667

NUMBER 4

TODD A. DRUMM: Fundamental polyhedra for Margulis space-times 677

C. BLANCHET, N. HABEGGER, G. MASBAUM and P. VOGEL: Three-manifold invariants derived from the Kauffman bracket 685

S. AKBULUT and H. KING: Algebraicity of immersions in $\mathbb{R}^n$ 701

GABRIEL KATZ: Local formulae in equivariant bordisms 713

SŁAWOMIR KWASIK and REINHARD SCHULTZ: Vanishing of Whitehead torsion in dimension four 735

WILLIAM A. ARVOLA: The fundamental group of the complement of an arrangement of complex hyperplanes 757

VIKTOR L. GINZBURG: Calculation of contact and symplectic cobordism groups.... 767

GEOFFREY MESS: The Torelli groups for genus 2 and 3 surfaces 775

J. C. GÓMEZ-LARRAÑAGA and F. GONZÁLEZ-ACUÑA: Lusternik-Schnirelmann category of 3-manifolds 791

MICHAEL L. MIHALIK and STEVEN T. TSCHANTZ: One relator groups are semistable at infinity 801

YOSHIYUKI YOKOTA: Polynomial invariants of positive links 805

JOHN ROGNES: A spectrum level rank filtration in algebraic K-theory 813

C. CROKE, A. FATHI and J. FELDMAN: The marked length-spectrum of a surface of nonpositive curvature 847

MIKE BOYLE: Almost flow equivalence for hyperbolic basic sets 857

V. G. TURAEV and O. Y. VIRO: State sum invariants of 3-manifolds and quantum $6j$-symbols 865

TOPOLOGY

Notes for Contributors

1. Manuscripts must be written in English, French or German.

2. Any necessary illustrations should be drawn on good quality white paper or board, using Indian ink, and should be drawn to about twice the required size. Any lettering should be large and bold enough to be legible after the diagram has been reduced for printing. A list of the captions to the figures should be typed on a separate sheet.

3. It will be of great assistance if the following conventions are adopted:

(i) The manuscript should be typewritten, using double or triple line-spacing, on one side of the paper only and with generous margins.

(ii) References should be indicated in the text by numerals in square brackets, thus: [21], and the full references listed at the end of the article, numbered and listed in alphabetical order of first-named authors. Journal references should include the title of the article cited, the title of the journal abbreviated in the style of the *World List of Scientific Periodicals* (4th edn., Butterworth, London, 1963), the volume, year of publication and inclusive page numbers. Book references should include the full title, the publisher, and the place and year of publication. References should be given as in previous issues of *Topology*.

(iii) Footnotes should be typed where they occur in the text, but separated from it by horizontal lines above and below; they should be indicated by the following symbols, used in order and commencing afresh on each page: † ‡ § ‖ ¶.

(iv) Type-faces should be very carefully distinguished on the manuscript, using the following standard methods of marking:

Small capitals (A,P,S) should be indicated by double underlining, thus A,S.

Capital letters (A,P,S), where it is necessary to mark them distinctively, should be indicated by triple underlining, thus A,S; where necessary this marking may be added to that for other type-faces such as italic, bold, etc.

Italic capitals (*A,P,S*) and lower-case letters (*a,p,s*) should be indicated by a single underline thus A,s.

Bold-face capitals (**A,P,S**) and lower-case letters (**a,p,s**) should be indicated by a curly underline, thus A,s.

Script letters ($\mathscr{A},\mathscr{P},\mathscr{S}$) should be indicated by a small cross underneath each character, thus A,P.

Fraktur ('German') characters ($\mathfrak{A},\mathfrak{B},\mathfrak{C}$) should be carefully drawn and encircled in GREEN.

Greek characters (Δ, Π, α, μ, etc.) should NOT be underlined or encircled; they should be carefully drawn so as to avoid confusion with similar Roman characters and identified when first used by a marginal note of the form 'β—lower-case Greek beta'.

In order to avoid difficulties in printing, special symbols and accented letters should wherever possible be restricted to those commonly found in the literature, and should be very clearly drawn and identified.

Please differentiate carefully between the letter *l* and the numeral 1, between O, *o* and the zero 0, between the 'prime' (as in x') and the superior figure 1 (x^1).

(v) Superiors and inferiors should be clearly distinguished, using the marking $\overset{2}{\vee}$, $\underset{2}{\wedge}$ where necessary and special attention paid to second-order terms.
